

It's important that our customers can see we work hard to keep them informed and treat their requests in a timely and accurate manner, so we publish and live by the targets we set.

The majority of the requests customers have get immediately logged in our system. We update customers with query progress and progress against the timescales we agree (except the ones we answer straight away such as a simple question for example!)

Many of our SLA's rely on our tier one suppliers service levels, and to keep them on their toes we even monitor how they perform so you can be assured the highest quality of service at all times.
